AXIS Entry Manager
Easy access management powered by IP

AXIS Entry Manager is a web-based software solution developed specifically for access control for small systems with basic needs. It comes pre-loaded on AXIS A1001 Network Door Controller and is used for installation, configuration, and administration of credentials. Being a fully distributed solution, all data is stored in the controllers and the system can be managed from any computer on the network. The system is completed with standard IT equipment, readers, door locks and door position sensors that meet the installation requirements.

> **Pre-loaded on AXIS A1001 Network Door Controller**

> **For small systems with basic needs**

> **Controls who enters where and when**

> **Intuitive interface**

> **Supports most reader types, door locks, and door position sensors**
